Thematic problematics

Rosacea (being of being benign to being beginning): trace and rhizome:

Ven- ject-col :///-> (value, throw, collect) against, as it were, art of image veneers only spliced in place but rather than a conflux in place the extension of hypokomeinon or strata explosive to a motion maintained to the recognition of form and instead of photo field valences a momentum of motion and movement and material parings of social exigencies and broadening lexical contingencies.

Of these a syllepsis drawing on syllogism recovering of the binary incidences problematic to rhetorics but resourced through discourse deterritorializing paradigmatic status to experiential vision as dedifferentiation or broadly shared impetus remarked to morphogenic evaluation of topological status to polyphonic osmotic sonorousness of schema to sense construct as that very metamorphic artistic proof of form through its trace upon potential.

“underlining” morphs to the relation of
“limming” to drawing, of limits as modality-
trace...however his affiliation to representing
of events is a step ahead of the more primary
“presenting” by which Hegel approaches
phenomenal reading and accordingly for me

Khan has described Heraclitus as relating various domains of human experience through a kind of sonorousness linking through his poetics the dimensions of religion, experience, culture, poetry, cosmogony, daily events, war and peace. The colloidal states of landscape radicals as he uses them are thus similar to the I Ching, and just as the I Ching relates to chance so does the chain of signifiers in Heraclitus also have their morphic value of transformation “expect the unexpected” around the canonical tropes or turns of spatial projection in person mood and quality of qualitative parameters in their morphology and metamorphosis of movement in mind and matter. Similarly Lacan thinks in terms of a chain of signifiers, and Kant of the conditions of experience as simultaneously the conditions of the objects of experience- if I may trope Khan, Lacan, and Kant.

...Philosophically, I am interested in rhetoric, namely ethos pathos and dialectic reconsidered towards the invitational space the first two terms project which are as much to say as “discourse” . What this means for me in terms of drawing is that movement in mind and matter as drawing virtuality looks for true motion and conflux , rather than the indexical thinking of photographic stills or cinematic ganging of such “points” of reference, in our time “context” has , similarly come to be reevaluated, for example in the broad sense of a kind of neurological model of media semiotics such as Eugeni suggests and what has been termed “Semiotic Blending or the “semiotic niche”- which bring a sense of evolution to the critique of Structuralism or associative-topological thinking through common denominators or “morphological arrows”. This I take to be in its grounding in the consideration of the way creatures use their environments proffers a kind reevaluation of Marxism by changing the sense of “capital” towards creativity itself...

Reality outside or inside or alike posited... that which is cannot be otherwise in that it is but that is our reading according to a non directive agency. Picasso's paradox- to seek, to find,... each is the moment of the other. The Musical question- we are born to change the question through its changeability as a question. Everything is changed, nothing is to be changed in that it is.

Subliminal, liminal, the first is secondary agency in retreat of the primary, liminal is a word however for drawing: to lim....(relates to limit)- to create the limits or appreciate as it were- reading. Sublime- the reasserting links to David Bohm's Rhea model(to go from the Medieval Bohm to the Einstein contemporary) ... to take a second look.

Of the Orphic tradition then of going behind the scenes of the official poetry, fate as ruling the gods, chaos, chance are the primeval chaos, a different idea than nature which is a human convention as a substrata of religious identification towards the formative, formative nature is the nature of nature, morphology is the morpheme for "form".

Agency: law- playground for the conceptual artists.... Virtuality displaces this in the mode of creative capital which has a resonance to semiotic blending, niche. A nice niche is the crème de la crème by which we all scream for ice cream. Nonsense order, planted by dream order towards a kind of ReM "catch" or Freudian slip within the contingency and transgression moods and modes of devolving experience to its capital stakes. More form is the morphing of the formative

The sense of “aural” as a word – morpheme that shape both aural as sound and aura per aurora or visualization- the sense of this radiance, shows up in art- Orphism, Targets per Johns, Duchamp's Anemic Cinema, Arthur Dove, and also Wright's Guggenheim. For Heraclitus, relating the bow and the lyre syllogistically to what we appreciate as Dionysian and Apollonian consciousness he indeed is looking into phenomenology upon its own event- that sight reads sound and sound reads sight.

For me art is often an interpolation and interpellation of events, and in considering information architecture -architecture itself is a programmatic that give an interesting contrast between the Architects book- now magazine, which transports culture mushroom style, sporadically, by vectors of ...

:What are the architectures of architext
linking local syllepsis to cyber abbracciarie
between immersion interaction and
generativity. Where is redoing genesis not
already a work in progress... how can one use
interpolation and interpellation to cure the
addiction to "points"...? Is the collective
subconscious deliberately buried to
constitute a found object? How does one
constitute a subject within the palimpsest of
definitions towards natural?. How discursive
is discourse? How allied are the alloysis of
psychological colloids the matrix of
topological rhetorics towards the
transdisciplinary particularization of
morpheme to radical as artificial to usage and
chords strings –threads of virtuality and
constitution of
subject towards a naturalness within cruel
theatre and the palimpsest of kindliness of
kinds? Is oscillation the ghost?

The sense of "aural" as a word – morpheme that shape both aural as sound and aura per aurora or visualization- the sense of this radiance, shows up in art- Orphism, Targets per Johns, Duchamps Anemic Cinema, Arthur Dove, and also Wright's Guggenheim. For Heraclitus, relating the bow and the lyre syllogistically to what we appreciate as Dionysian and Apollonian consciousness he indeed is looking into phenomenology upon its own event- that sight reads sound and sound reads sight.

For me art is often an interpolation and interpellation of events, and in considering information

g contrast between the
le, sporadically, by vectors of

Greek Zauma means that which is girded : in botany rhizome mass of roots i.e. rhea- many of that which is guarded. Guarding is the general sense of Tehthe: nurse, and relates to the concept as well of soma or body – that which is guarded. Zeuxis in Rhetoric has to do with syllepsis- touching on many subjects

Zeus as fire is a touch that identifies whereas Zeuxis conflates context.

Anthropos: Andros to Anthropos – unknown but in my opinion Andros + tropos uses the th because Greek liked to alternate consonants and vowels generally, Andros + trope refers to trope as limit in the sense of summer and winter solstice and equinox (chiasmus structure_> to not go below horizon)...

The Abstract Mood and Mode of Raster and Vector in Cyber Drawing Trace and Rhizome
As though nodes of voice at the narrative levels of abstraction I can note that Immanence or Unity , that in which the totality is greater than the sum of its parts, is encompassing through the conception of that concept of encompassing (in Italian “Abbracciari Embrace, comprehend, measure or Greek- syllepsis..(touch upon- link). Following unity a kind of second person- “dialectic”. A Third string then would be syllogism and a fourth chiasmus as a kind of verbal crossmultiplying. Towards that last I would like to note that the cross bar is evocative of the nature of “trope” which originally referred to the winter and summer solstice, that which holds the planets to view.

The subconscious is the realm of transference, chain of signifiers, effectuating of affect rather than affecting effect. Lacan speaks of “stain” or relation to environment and in this regard prescient in his pre-science way of semiotic blending or the way creatures use resources. Form as the mirror of morphology is the exegesis beyond the stain of the mimetic and beyond narcissus and medusa seeks the Orphic origins of going behind the scenes of poetry to find the poesis of the germinal node the circle of attention engages from within its own necessary construct.

Around this preamble construct an article relating the art movement of Orphism and its interest in dyes to osmotic consciousness between the syllogistic relation of Plato Orpheus and Heraclitus. Examine the sense of a horizon which pertains to a chiasmus, as chiasmus relates to Lacan's mathemes and their examination of underwriting and overwriting, mapping, journalism, and this horizon per the original meaning of trope in which the summer and winter solstice and equinox return the constellations to horizon...”sentinels” of the sentient... that this agency was demanded of “Tethe” the ‘behind the scenes” goddess of aquifers, nursing as it were... Identify trace and rhizome as moods and modes that embed the semiotic and the phenomenologi

Bios-Bow of Heraclitean Bow and Lyre... relates to chiasmus and matheme: the horizon or division references the origin of trope as recalling to view constellations, the summer and winter equinox... The horizon, slicing horizon: = comprehension: abbracciari: syllepsis.

Correspondingly: art etymologies rooted in a "revamped structuralism" by which a diagrammatic content of verbal visual morphemes as verbal visual radicals (roots) vary towards schematics the embedding of trace and rhizome, other diagrammatics... venn diagrams, architectural, raster and vector, morphological arrows through semiotic blending and niches of evolutionary adaptation and use of environment blending effectuating affect and affecting effect , interpellation and interpolation, horismus, litotes, synechdoche as extension in space.. torus as self mapping, scroll, shuffle and meander... unity opposition and intersection (Boolean sets) derived of cubism with "anemic cinema " " and the Arthur Dove Target tradition of Orphism giving visual and text mapping impetus toward rhetoric as the invitational structuralism of perception as embedding semiotics and phenomenology. My particular interest : art etymologies involving verbal visual morphemes in relation to Pevsners architectural dictionary as a corresponding trope of reference.

GuggenOrphic Archipuncture Tinctures

The intent is to discover to what one might call no-space or the detachment of figure from ground in relation to a contrasting conflation of views as two sets of possibilities whose morphological arrows relay an Orphic ethos, a sense of environment as on the one hand a “stain” something which is a tableau or palimpsest, and on the other hand the usage by which as environment is pertains to creatureliness of engaging perception to patterns of involvement.

How is a subject established? To extricate such from some environment makes one wonder how then that can really be the subject if it is that which is generated what then is the nature of the generation that is then again a constituent to as much as perception is per its own precept and percept?

chance to Democritus in his concept of the atom may be working towards a musical distinction: atonal and harmonic music which at a high level of abstraction might be seen to share the ground of well, music.. somehow cohesive either way... but it is not that atonal music to be thinkable must be the opposite of harmonic... and vice versa calling them opposite is highly arbitrary, just as black may not be the opposite of white but rather of music. I have to admit that kind of validates Wittgenstein but if one separates oneself from the perceptual level of inevitability the terms of critiquing a grammar such as he proposes are founded on their own assumptions. Rhetoric on the other hand is not at all grammar. Rather it proposes various inflections or degrees of difference that can turn on themselves towards distinction without themselves following consciousness, for the fact that things are because they have no reason not to be is not at all to say they follow the path of least resistance. "following" which Wittgenstein means by "pointing" is the assumption that needs examining here.

Kant in stating "the conditions of experience are simultaneously the conditions of the objects of experience" seems to me to place the cognitive value of perception at a threshold that Chardin's paintings maintain - in pertaining to the gaze left behind- the human exited suggesting partially the painting as having its own vision, a trope we meet for example often in David Caspar Freidrich. That the conditions are behind the scenes of the evident, similar perhaps to the way Mieke Bal suggests "Albertine" is not a person, but set of circumstances (Albertine window?).. are however more familiar to me than the writer Forsey because I feel the idea of herms, spoils, the tradition one meets in Tiepolo for example or Watteau proffered as a puzzle so to speak, a labyrinth concealed in the monumental belong to a very traditional chord of rhetoric namely the Orphic tradition by which the official poetry is set aside and discourse is taken to the level of psychological colloids of experiential radicals. (This tradition has accordingly set up since ancient times the analytical moods and modes of "Apollonian" and "Dyonesian"....such "discourse as Chardin lacks towards the bow he finds in the lyre, lacking in the lyre finds to the bow..

sun warm because round would be a misapprehension of cause and effect.. However Berkeley adjures that perceiving a round luminous body warm we see the sun as warm in terms of this topology of concurrences however (p419) principles of Human Knowledge. he observes the separation of difference between attributes and causes ,ideas of the imagination and direct sense experience are nevertheless within the senses also ideas, the senses comprehend – ideas are this agency that constitute the senses In that that they are indeed constituent.
The topology of concurrences then
...

So my idea is fairly simple: that rhetoric is a poetic that underlies the creation of categories in philosophy and science and at a critique: categorical imperative is in the tracing of that imperative an understanding towards ethos and pathos of the triad that continues to dialectic is in those first two categories defining discourse , a kind of paradox or antinomy in that discourse evades categories not by prevarication but in realizing the force of associations which are the concept emerging of the reading of experience (continuing here from Kant to Berkeley) as ontological in the sense of the phenomenal embedded in the semiotic- i.e. the very reading of sensation which is "language" and words reflecting on language as concept meaning which in human terms tends to strongly implicate "dimension" to words-...

In these instances we have seen analysis as something with very visual architectural roots in the herms, spoils of war depicted in art and architectural decoration by which the idea of trope originates partly in sacrifices in which alter is a taking apart of elements and then reconstituted i.e. animal hide over bones, become stacks of arms, flower boats, or canvas skin over stretcher bones reflective of the sailing vessel and reconstituted view of the world per the traditional “nature Morte’ (trope please to mortisse and tenon).

Artist's State

Architectural Videos

These are motions sensor drawings which engage the drawing motion as creating the topography or Morphological arrows that find the semiotic embedded in the phenomenological, the sense of common denominators in metamorphosis. This is accordingly to find the tableau and the environment as generating a semiotic niche for an osmotic dimension of formative nature within the language of art as generating its own perception, its own experience , simultaneously while maintaining a sense of the question that also generates experience. The sense of experience has on the one hand the “stain” the trace trajectory, on other there is a conflux with the rhizomatic-unusual architectures of association and generative immersion reflective of ethos pathos and dialectic at the discursive level...

it is what is rather than it is that it is , it is then that we don't get the Heraclitean "for these transposed are those and those transposed again are these." Discourse is the verbal conditioning of the present moment.

In The drawing at left the particular nature of the mark evolves through many scales that meet perception as though perception were a superconductor. The cyber media in particular mediates this elementalism wherein the motion sensor as a psychological colloid carrying within a prosody and trace- tractytus is within the herm, the spoils, the distraction of the hermeneutical or reference to instead, a colloidal status of unknown sequence and therefore metamorphic values behind the scenes of any expectations: we think of orbiting the sun yet really we are falling diagonally through space in in relation to the also falling object... our idea of a "Point" handicaps perception..."what is the point"? the cyber sleeve acts within the drawing as a kind of super conductor in which a pattern block coopt the block by becoming an interrupted pattern embarking thereby upon interpolation and interpellation as termata in transposel

Wittgenstein post philosophy:

The world is all that is the case.

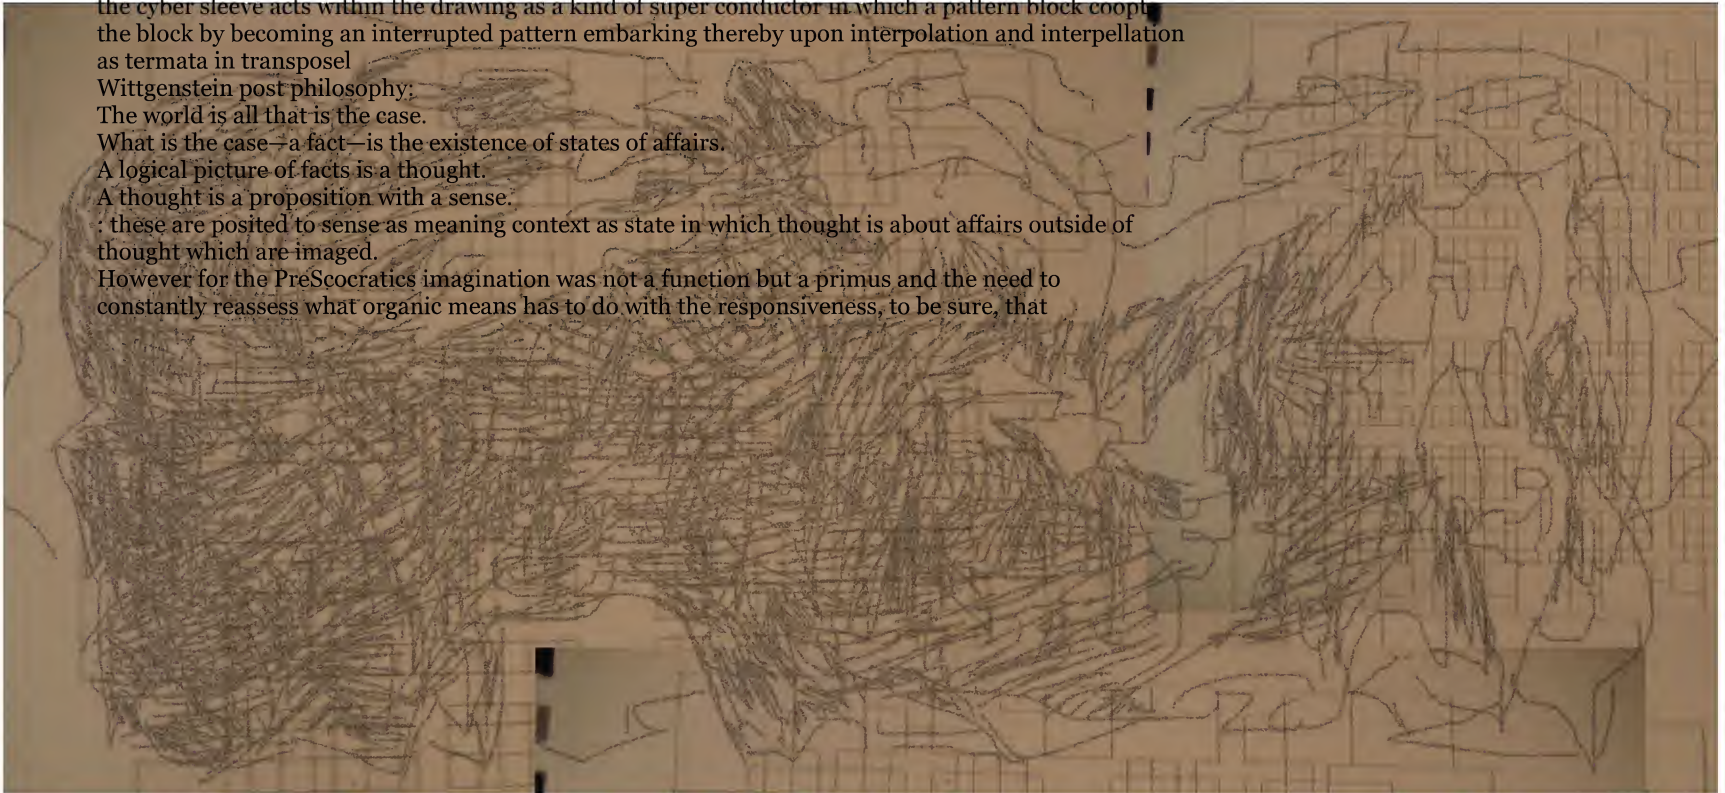

What is the case—a fact—is the existence of states of affairs.

A logical picture of facts is a thought.

A thought is a proposition with a sense.

: these are posited to sense as meaning context as state in which thought is about affairs outside of thought which are imaged.

However for the PreSocratics imagination was not a function but a primus and the need to constantly reassess what organic means has to do with the responsiveness, to be sure, that

or what in rhetoric is called chiasmus- for example the part our visual chord that places the image we receive upside down into an inversion or x reading is named the "chiasm". The word hu means both the roar of the crowd , report- as in crack of the whip or thunderbolt ie sense reading of phenomenae , and also means dawn or aurora, thus between roar and aurora the visual and verbal gradients of sonousness and spectrum in sound and sight are implicated to the human condition- I hazard that hu has been combined with latin to create hu + a main or direction to form the word human. That is my artistic etymology:

In these drawings the trope to charcoal and paper through software streaming which transforms layers of position is a mapping from inside out and outside in similar to that paradigm of a matrix of fleshy fiber- the bark marked over by the structure- the tree limbs to charcoal and erasures made with the congealed sap. These are symbols of architectural herms, sacrifices in which the net effect of the world ranged to vision.

creating the sense whole always ps the onance and able as the active to mulating zero has he meant

nonbeing is not and being is which is "stup..." chain of signifiers... take a look at that last sentence... ontology... it means the mind must see with first and last, the idea of sublimity is the same as the extinguishing of the drive as the object of the drive on the strength according to drawing it is. Thus in the pattern of the subconscious that REM pattern of the creative cycle, stumbling where it has been interrupted in dreams Heraclitus said: "An man forges a light in the night when his is touches the dead, waking he touches the sleeper", Heidegger said he c sentence but it has the science of presience... nonsense and dissonance, sense...

The transience, dissonance and nonsense, nonsense and dissonance, sense and ability of drawing as prescient to the art and science of visual rhetoric in visual verbal space of language as a mega zine - art as effectuating agency affecting effect. Half and Half Bricabrac syllogisms illogical in the mirror but polyphonic in the morphology.
